

## **Abstract**

**Author:** Kristýna Tunková

**Title:** Case study of physiotherapeutic care of a patient with a diagnose of cervicocranial syndrom

This thesis deals with cervicocranial syndrome. The work is divided into two parts, theoretical and specific. The theoretical part describes different kinds of headaches with the possibilities of their therapy. A case study of a patient suffering from cervicocranial syndrome is described in the specific part. This patient underwent therapy in Medicentrum Praha in the period of 18. 1. – 2. 2. 2012. The case study includes initial kinesiology examination, on which basis targets and therapy process have been set. It also includes the description of therapeutic methods and final kinesiology examination, after which the effect the described therapy was evaluated.

**Key words:** cervicocranial syndrom, secondary headaches, physiotherapy, case study
